Once you hit ok on this screen a GitHub repository will be created online that you can access anywhere.
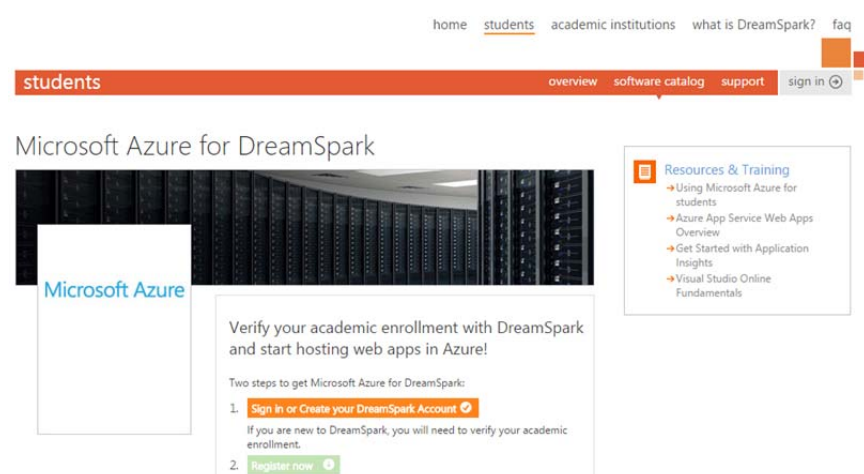

Creating a Microsoft Account and Linking with Dreamspark

To access Azure you need a Microsoft Account (you will probably already have one) further to access the full functionality available to RGU students and staff you need to link your Microsoft Account to your RGU email address, this allows it to identify you as an RGU student. If you don't have a Microsoft account you will need to create one.

Windows can get confused here between your university account and your Microsoft account on the university system. Because of this you should do the steps below in an **incognito on chrome** or a **private window on firefox,** this simply allows the browser to ignore previous info.

Go to dreamspark .com and select the get Azure Now link at the bottom of the page.

Click the orange sign in button and you will be taken to the page below. Add your own information in here. You do not have to use your uni email as the preferred email address here.

students   overview   software catalog   support   sign in ⊕

DreamSpark is for students worldwide. Create an account and verify your academic status to gain immediate access to Microsoft professional tools **at no cost!**

Your privacy is important. Please read our privacy & cookies.

Enter Your Account Information

☑ Yes, I'd like to receive email newsletters and student promotional offers about development tools and technologies from Microsoft.

continue to verify ⊕

Once completed just hit, continue to verify. This should take you to the verify screen. There are a number of different ways to verify, either via email or from the university login. The easiest way is to click I have a school account (it's American so they get mixed up between school and university). On

the screen that comes up just log in with your university account and this will verify you as a student.

If you go back to the dreamspark site now you should see the Green Register now link.

To register for Azure you need to go through another login process (blame Microsoft). This sets up your Azure account. It's a pretty easy form however one section requires you to enter a mobile number for ID verification. This then sends you a text or calls you for verification.
